

Build the security team the AI era requires — with the team you already have.

A six-month program in which your existing security/IT staff learn **AI-Driven Engineering** by shipping a real internal security tool from your own backlog — production-grade, deployed in your environment, owned by you. ~3 focused hours per person per week, alongside the day job.

THE COST OF THE STATUS QUO

Ten hours per person per week of manual security work is ~25% of each person's payroll — about \$100k a year for a four-person team on \$100k salaries, before overheads — and the backlog still grows. The market has already moved: ServiceNow, JPMorgan, Amazon, Capital One and Accenture are hiring security engineers who **build with AI**, not analysts who watch dashboards (58 archived job postings on record).

WHAT YOUR COMPANY KEEPS

- **The tool** — a deployed internal security solution, replacing manual work or a vendor contract
- **The team** — staff who can now build the next one without us
- **The infrastructure** — AI guardrails, governance policy, and build practices installed in your environment

INVESTMENT VS. ALTERNATIVES

Option	Cost	What remains after
AI Master's for Business (team of 2–3)	\$20–30k	Tool + team + infrastructure
SANS training (5 people)	~\$49k	Certificates
Hire one AI-security engineer	\$150k+/yr	One person (if they stay)
Consultancy build	\$60k+	A tool they must maintain for you

Comparison figures are illustrative 2026 market prices; format, certification and scope vary. Pricing: \$15k solo · \$20–30k team of 2–3 · \$40–60k team of 4–6 · 7+ custom. Single invoice. Ongoing: AI tooling ~\$100–200/seat/mo (your accounts); Inner Circle included 12 months, renewal separate.

The Ship Guarantee

If the agreed in-scope tool hasn't shipped by month six, the program stays open at no further program fee while your team remains actively engaged — until it ships. ("Shipped" = passed the security review gate and deployed in your environment for its agreed users.) Full refund available any time before the program starts. A deliverable-backed engagement, not a training subscription.

DELIVERY & OVERSIGHT

- Live cohort sessions + labs + recorded workshops; 12 months of ongoing Inner Circle included
- Monthly cohort-level stakeholder reporting (no individual surveillance)
- Builds run in **your environment on your accounts** — StationX doesn't store your code or data

PROCUREMENT FACTS

- StationX Ltd — UK company, est. 1999; 500,000+ professionals trained
- PO accepted · single invoice · DPA on request · security questionnaire supported · payment plans
- Seats transfer if a team member leaves
